

Take the paper chase out of DVSA/VOSA checks with CALIDUS VEhub vehicle management software

Maintaining the correct safety information across your fleet just got simpler and faster for you and your drivers. In the process of doing away with most of the paper, OBS Logistics and our strategic partner TomTom reinvented the process of keeping your fleet safe and in compliance with Driver & Vehicle Standards Agency (DVSA - previously VOSA) requirements. We provide a timely capability for recording accident information, as well as knowing where your key transport resources are.

The solution

CALIDUS VEhub runs as a straightforward App on the TomTom Bridge. This gives you an all-in-one driver-orientated dashboard device that acts as both Sat Nav and driver information centre.

The results

All your driver has to do is log on and, through a few easy steps, they can capture all the safety checking information the law requires before starting their journey. Photo capture and defect reporting make the process more consistent and accurate than paper, not to mention faster as an end to end process.

“A quick, easy, feature rich paper free vehicle checking system with defect reporting.”
