BRIDGE

Track your vehicle fleet in real time with GpsGate Tracker for TomTom BRIDGE

GpsGate develops software for GPS tracking and IoT. GpsGate Server is used in more than 100 countries to track vehicles and manage mobile assets with high expectations on stability and scalability. Our customers include transportation companies, utility companies, financial institutions, government agencies, police and fire departments. GpsGate AB is a privately owned software company with headquarters in the centre of Stockholm.

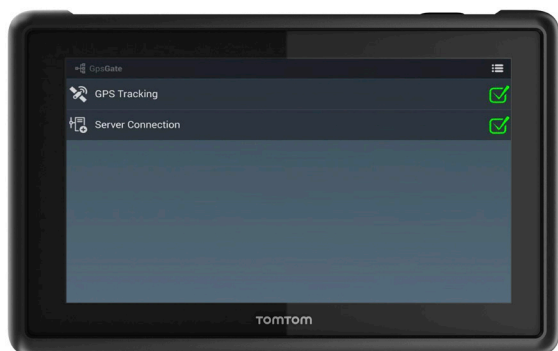

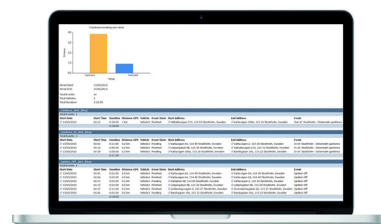

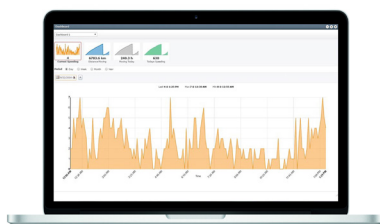

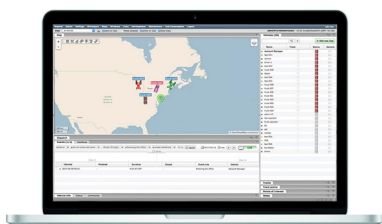

The solution

Use GpsGate Tracker to track your TomTom Bridge in real time on your GpsGate Server. GpsGate Server is a leading web based GPS tracking platform. GpsGate Server supports Real time tracking, Alerts, Notifications and Business reports to manage fleet usage. You can install GpsGate Server on-site on your own server or subscribe to it as a hosted service. GpsGate Tracker for TomTom requires a GpsGate Server installation.

The results

Users lower their fleet related costs and improve customer satisfaction by better utilization of their vehicle fleets. Cost savings include lower fuel consumption, elimination of excessive idling, Monitoring of harsh driving and better vehicle maintenance. Lower delivery times and increased dispatching capabilities improve customer satisfaction.

"We are happy that TomTom and GpsGate can provide a cost effective complete tracking and Navigation solution"

Henrik Thomasson, Product Manager at GpsGate.
